

# Tillerpilots TP10/22/32

Enjoy silence when sailing

## High performance for small to mid range sailboats

Simrad Tillerpilots are designed for high precision, reliable autosteering while drawing low current to optimise battery life. The hard wearing, waterproof body contains all controls and has been tested for many hours in total immersion. Exceptionally quiet in use, the Tillerpilot gives fast and positive performance for effective steering in a wide range of sea states and wind conditions.

A range of pilots offers performance to suit most small to medium sailboats. The TP22 and TP32 pilots offer easy interfacing to external devices using SimNet.. When interfaced, enhanced options such as sail to wind or sail to waypoint are easily accessed via the key pad.

The recommendations assume typical coastal sailing conditions and in circumstances where extended voyages or more extreme weather conditions are expected, the choice of a higher specification pilot is recommended including the full range of Simrad below deck pilots.

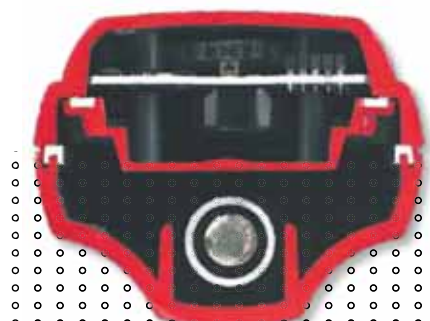

### Special features:

- Waterproof sealing for protection of the elements and reliable use
- Extremely quiet, enjoy the silence of sailing
- SimNet compatible, simple plug and play installation (TP22 and TP32)
- Easy operation

### Remote Control for Tillerpilots

The remote control, the HR22, enables the TP22 and TP32 to perform all of their most sophisticated functions from any position on board, for example, under the spray hood in rough weather.

Waterproof sealing  
Separate pushrod seal system and double sealed electronics for maximum protection.

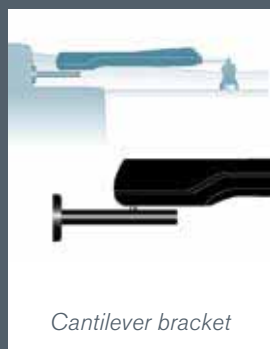

TP10  
Yachts up to 33ft

TP22\*  
Yachts up to 36ft

TP32\*  
Yachts up to 39ft
